

SCHEMA

Radiation: 45 Gy / 25 fractions of 1.8 Gy + 5.4 Gy / 3 fractions parametrium boost + 40 Gy LDR or 30 Gy HDR brachytherapy

Cisplatin: X1 weekly cisplatin 40 mg/m² (maximum 70 mg) days 2, 9, 16, 23, 30 of radiation (5 total infusions;
a sixth administration on day 36 is permissible at the treating physician's discretion)

Triapine: X3 weekly 3-aminopyridine-2-carboxaldehyde thiosemicarbazone (Triapine) 25 mg/m² (maximum 50 mg)
days 1, 3, 5, 8, 10, 12, 15, 17, 19, 22, 24, 26, 29, 31, 33 of radiation (15 total infusions)

Statistics: This is an open label randomized (1:1) allocation ratio single stage phase II clinical trial.

3. PATIENT SELECTION, ELIGIBILITY, AND INELIGIBILITY CRITERIA

Note: Per NCI guidelines, exceptions to inclusion and to exclusion criteria are not permitted.

For questions concerning eligibility, please contact the NRG Statistical and Data Management Center-Pittsburgh Office (via the contact list, NRG web site).

3.1 Eligibility Criteria

A patient cannot be considered eligible for this study unless ALL of the following conditions are met.

3.1.1 Patient has pathologic diagnosis of stage IB2 (> 5 cm), II, IIIB or IVA squamous, adenocarcinoma, or adenosquamous carcinoma of the uterine cervix or stage II-IVA squamous, adenocarcinoma, or adenosquamous carcinoma of the vagina not amenable to curative surgical resection alone. The presence or absence of para-aortic lymph node metastasis will be based on pre-therapy ¹⁸F-FDG PET/CT. If the baseline ¹⁸F-FDG PET/CT identifies hypermetabolic para-aortic disease, such patients will NOT be eligible. The patient must be able to tolerate imaging requirements of an ¹⁸F-FDG PET/CT scan.

3.1.2 Patient must provide study specific informed consent prior to study entry.

3.1.3 Patient must have a GOG performance status of 0, 1, or 2 or equivalent (Appendix A).

3.1.4 Patient must have adequate organ and marrow function as defined below:

absolute neutrophil count > 1,500/ μ L

platelets > 100,000/ μ L

hemoglobin > 10 g/dL

total bilirubin < 2.0 mg/dL

AST(SGOT)/ALT(SGPT) < 2.5 X institutional upper limit of normal

PT/aPTT < 1.5 X institutional upper limit of normal

Creatinine \leq 1.5 mg/dL to receive weekly cisplatin*

*Patients whose serum creatinine is between 1.5 and 1.9 mg/dL are eligible for cisplatin if there is no hydronephrosis and the estimated creatinine clearance (CCr) is \geq 30 ml/min. For the purpose of estimating the CCr, the formula of Cockcroft and Gault for females should be used:

$$CCr = 0.85 \times (140 - \text{age}) \times \text{IBW} / (\text{Scr} \times 72)$$

where age is the patient's age in years (from 20 to 80 years), Scr is the serum creatinine in mg/dL, and IBW is the ideal body weight in kg (according to the calculation $\text{IBW} = 45.5 \text{ kg} + 2.3 \text{ kg}$ for each inch over 5 feet).

3.1.5 Patient does not have uncontrolled diabetes mellitus (i.e., fasting blood glucose >200 mg/dL).

3.1.6 Patient has a life expectancy of greater than 20 weeks.

3.1.7 Age is \geq 18 years.

3.1.8 Patient does not have known brain metastases (testing *optional*).

3.1.9 Patient does not have known human immunodeficiency virus syndrome

(HIV, testing *optional*). Known HIV-positive patients receiving combination antiretroviral therapy are ineligible because of the potential for pharmacokinetic interactions with triapine.

3.1.10 Patient does not have a known allergy to compounds of similar or biologic composition as triapine.

3.1.11 Patient does not have known glucose-6-phosphate dehydrogenase (G6PD) deficiency as the condition interferes with triapine antidote metabolism (G6PD testing *optional*).

3.1.12 Patient is not *actively* breastfeeding (or has agreed to discontinue breastfeeding before the initiation of protocol therapy).

3.2 Ineligibility Criteria

Patients with one or more of the following conditions are NOT eligible for this study.

3.2.1 Patient has another concurrent *active* invasive malignancy.

3.2.2 Patient has had a prior invasive malignancy diagnosed within the last three years (except [1] non-melanoma skin cancer or [2] prior *in situ* carcinoma of the cervix). Patients are excluded if they have received prior pelvic radiotherapy for any reason that would contribute radiation dose that would exceed tolerance of normal tissues at the discretion of the treating physician.

3.2.3 Patient has uncontrolled intercurrent illness including, but not limited to, symptomatic congestive heart failure, unstable angina pectoris, myocardial infarction within six months of protocol initiation, cardiac arrhythmia within six months of protocol initiation; known inadequately controlled hypertension; clinically significant pulmonary disease including dyspnea at rest, or patients requiring supplemental oxygen, or poor pulmonary reserve; proteinuria or clinically significant renal function impairment (baseline serum creatinine >2 mg/dL); or psychiatric illness/social situations that would limit compliance with study requirements.

3.2.4 Patient is receiving another investigational agent for the treatment of cancer.

3.2.5 Patient is *currently* pregnant. Patient must agree to use two forms of birth control if they are of child-bearing potential.
